

HSBC Global Investment Funds - Global Lower Carbon Equity

Share Class XC

28 Feb 2021

Fund Objective and Strategy

Investment Objective

The Fund aims to provide long term capital growth and income by investing in shares of companies that have a lower carbon footprint compared to the MSCI World Net Index.

Investment Policy

In normal market conditions, the Fund will invest at least 90% of its assets in shares of companies of any size that are based in, or carry out the larger part of their business activities in, developed markets. The Fund's investment process identifies stocks from a universe of investable shares, and ranks them from the least attractive to most attractive based upon certain factors, such as value, quality, momentum, low risk and size. All stocks in the portfolio are assessed for their carbon footprint and a portfolio is created, which maximizes the exposure to the higher ranked stocks and reduces the Fund's carbon footprint. The Fund will not invest in companies involved in the production of tobacco or related activities. The Fund may invest up to 10% of its assets in other funds, including HSBC funds. See the Prospectus for a full description of the investment objectives and derivative usage.

Risk Disclosure

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Further information on the Fund's potential risks can be found in the Key Investor Information Document and Prospectus.
- UCITS HAVE NO GUARANTEED RETURN AND PAST PERFORMANCE DOES NOT GUARANTEE THE FUTURE ONES.

¹Result is annualised when calculation period is over one year.

²Ongoing Charges Figure, is based on expenses over a year. The figure includes annual management charge but not the transaction costs. Such figures may vary from time to time.

Monthly Performance Commentary

Market Review

Global equities rose in February as investors grew optimistic over the global economic recovery, with worldwide COVID-19 cases and deaths falling, hopes of US fiscal stimulus increasing and global corporate earnings beating market expectations, although rising bond yields tapered sentiment towards the end of the month. US stocks rose on the back of solid corporate earnings results, raised hopes of Congress passing through US fiscal stimulus and an improving labor market as unemployment claims fell to the lowest level since November 2020. Jay Powell, the US Federal Reserve Chairperson, pledged to keep monetary policy loose during the recovery. The 10 year US treasury yield rose to 1.5% in the month as investors weighed the prospect of rising inflation concerns, which caused equities to pull back towards the end of the month. European stocks moved higher amid corporate earnings that beat market expectations and continued optimism of an economic recovery. Investors also grew more bullish on Italy, after the former European Central Bank President, Mario Draghi, stepped in to form a new government under his leadership to stabilise political tensions. In the UK, the COVID-19 vaccine programme made significant progress across the population and the government announced a timeline to exit lockdowns, boosting hopes of resuming economic activity. Asian stocks generally advanced as investors grew positive over the global recovery and progress around US stimulus talks. Indian equities performed strongly following the announcement of a pro-growth 2021 government budget and Japanese equities also posted solid gains as it began its COVID-19 vaccination programme.

Factor Performance

In February, global factor performance reflected investor optimism of potential better economic activity and their preference for risk, which benefited pro-cyclical factors as they outperformed their defensive counterparts, in the period. Within styles, Value was the main driver of factor performance, as it continued to be rewarded strongly and outperformed all other alpha factors across all regions globally, in February. Oil prices rally also helped as cheap energy stocks provided tailwind. Size traded broadly sideways and closed February largely flat on performance. At the other end of the spectrum, in the defensive universe, Low Risk and Quality factors proved headwinds. Industry Momentum factor was only slightly underwater, with the more defensive sectors including utilities, health care and consumer staples as key underperformers. At regional level, notable differences were in the UK and North America, where Size factor was well rewarded and finished in positive territory. In Asia Pacific, by contrast to the global picture, Quality was the laggard factor while Industry Momentum, Low Risk and Size were largely flat on performance, and Value outperformed by a higher margin than in other regions. In Europe, Quality held up best, compared to other regions, despite the general defensives underperformance. In the risk space, price momentum traded above the line for the larger part of the month, before it turned sharply to mark a weak February.

Fund Commentary

On a portfolio level, Value contributed to performance, however it was offset by losses predominantly coming from exposure to Low Risk and Quality factors.

Industries

On an industry basis, our overweight allocations to Insurance and Media & Entertainment coupled with our underweight exposures to Food, Beverage & Tobacco and Food & Staples Retailing contributed to performance. Conversely, our overweight allocations to Health Care Equipment & Services and Technology Hardware & Equipment along with our underweight exposures to Banks and Energy weighed on performance.

Countries

On a country basis, our overweight allocations to Italy and Switzerland coupled with our underweight exposures to Belgium and Canada contributed to performance. Conversely, our overweight allocations to Israel and Portugal along with our underweight exposures to Japan and Hong Kong weighed on performance.

Stock Level

On a stock level basis, our overweight allocations to Twitter (Communication Services, USA) and Booking Holdings (Consumer Discretionary, USA) contributed to performance. Conversely, our overweight allocations to PerkinElmer (Health Care, USA) and Hoya (Health Care, JPN) along with our underweight exposures to Jp Morgan Chase & Co. (Financials, USA) and Exxon Mobil (Energy, USA) weighed on performance.

Terms of Glossary

Accumulation Share: a type of share where the income earned by the Fund is retained in the Fund

ACD: HSBC Global Asset Management (UK) Limited, the Authorised Corporate Director of the Company

Actively Managed: where the fund manager uses their expertise to pick investments to achieve the fund's objectives

Beta: an historical measure of volatility to measure how a fund moves versus its benchmark (i.e. an Index)

Collective Investment Scheme: a fund that more than one person contributes to with the aim of increasing the value of their investments or receiving income from a pooled investment. A fund manager will invest the pooled money into one or more types of asset, such as stocks, bonds or property

Developed Markets: countries with relatively high levels of personal income and established economies

Emerging Markets (EM): countries that are progressing toward becoming advanced, usually shown by some development in financial markets, the existence of some form of stock exchange and a regulatory body

Equities: shares issued by a company

Futures: a financial contract obligating the buyer to purchase an asset (or the seller to sell an asset), such as a physical commodity or a financial instrument, at a predetermined future date and price

Growth: the increase in the value of investments

Hedge Funds: an investment fund that pools money from investors and invests in a variety of assets, often with complex investment strategies and risk management techniques

Hedge or Hedging: using derivative type investments as a way to reduce risk

Income: money generated by a fund, such as interest from a bond or a dividend from a share, which can be paid out to its investors or paid back into the fund and reinvested

Income Share: the type of Share where the income earned by the Fund is paid out to you

Information Ratio: a measure of the risk-adjusted return of a fund against its benchmark

Market Capitalisation: the total dollar market value of a company's outstanding shares. Commonly referred to as "market cap", it is calculated by multiplying a company's shares outstanding by the current market price of one share

Net Asset Value (NAV): the value of the scheme property of a fund less the liabilities of the fund

Ongoing Charges Figure: a measure of what it costs to invest in a fund. It includes the fee paid to the ACD and other operating costs

Price Earnings (P/E) Ratio: the price paid for a share divided by the annual profit earned by the firm per share

Preference Shares: shares of a company which entitle the holder to a fixed dividend, whose payment takes priority over that of ordinary share dividends. Preference shares may be convertible to the ordinary shares of a company

Property-related securities: shares of property companies that own, manage or develop property and Real Estate Investment Trusts (REITs), which are investment companies that own buildings and land

Return(s): the money made or lost on an investment

Share(s): an equally valued holding in a fund of a company, representing part ownership of that fund, (including larger denomination shares and smaller denomination shares)

Sharpe ratio: a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations

Volatility: a measure of the size and frequency of changes in the value of an investment over a short space of time

Yield: the income from an investment, usually stated as a percentage of the value of the investment

Carbon Intensity Description: Portfolio's exposure to carbon-intensive companies, expressed in tons CO₂e/USD million revenue.

Carbon Intensity Formula: $\Sigma((\text{current value of investment}/\text{current portfolio value}) * (\text{issuer's Scope 1 and Scope 2 GHG emissions}/\text{issuer's \$M revenue}))$

Carbon Intensity Methodology: Scope 1 and Scope 2 GHG emissions are allocated based on portfolio weights (the current value of the investment relative to the current portfolio value), rather than the equity ownership approach. Gross values should be used.
